Roll no: 2116241501023 Phone: 9994089820

Branch: REC

Department: I AIML AD

Batch: 2028

Degree: B.E - AI & ML

### NeoColab\_REC\_CS23231\_DATA STRUCTURES

REC\_DS using C\_Week 1\_COD\_Question 3

Attempt : 2 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

Imagine you are working on a text processing tool and need to implement a feature that allows users to insert characters at a specific position.

Implement a program that takes user inputs to create a singly linked list of characters and inserts a new character after a given index in the list.

## **Input Format**

The first line of input consists of an integer N, representing the number of characters in the linked list.

The second line consists of a sequence of N characters, representing the linked list.

The third line consists of an integer index, representing the index(0-based) after

which the new character node needs to be inserted.

The fourth line consists of a character value representing the character to be inserted after the given index.

### **Output Format**

If the provided index is out of bounds (larger than the list size):

- 1. The first line of output prints "Invalid index".
- 2. The second line prints "Updated list: " followed by the unchanged linked list values.

Otherwise, the output prints "Updated list: " followed by the updated linked list after inserting the new character after the given index.

Refer to the sample output for formatting specifications.

### Sample Test Case

```
Input: 5
a b c d e
2
X
Output: Updated list: a b c X d e

Answer

#include<stdio.h>
#include<stdlib.h>

typedef struct Node{
   char data;
   struct Node* next;
}Node;

Node* createNode(char data)
{
   Node* newNode=(Node*)malloc(sizeof(Node));
   newNode->data=data;
```

```
return newNode;
         newNode->next=NULL;
       void insertAfter(Node* head,int index,char newChar)
         Node* newNode= createNode(newChar);
         Node* temp=head;
         int count=-1;
         while(count!=(index-1)){
           temp=temp->next;
            count++;
         }
   temp->next=temp-
temp->next=newNode;
         newNode->next=temp->next;
       void printList(Node* head){
         while(head){
            printf("%c ",head->data);
           head=head->next:
         }
         printf("\n");
       int main(){
         int Nindex;
         char newChar;
         scanf("%d",&N);
         Node* head=NULL, *tail=NULL;
         for (int i=0;i<N;i++){\wedge
            char ch;
           scanf(" %c",&ch);
            Node *newNode=createNode(ch);
           if(!head) head=newNode;
            else tail->next=newNode;
           tail=newNode;
, andex,&newChar);
, andex,&newChar);
insertAfter(head, index,newChar);
}
else{
```

2716241501023

2116241501023

2116241501023

```
2116241501023
                                                                                                     2116241501023
printf("Invalid index\n");
}
printf("Updated list: ");
printList(head);
           return 0;
        }
```

Status: Correct Marks: 10/10
